## Vinyl Flooring

- Resilient flooring is designed to be easy on the environment.
- Products include sustainable features such as recycled content.
- They contribute to good indoor air quality and last a long time, making it unnecessary to replace them.
- Resilient flooring holds up incredibly well under most trying conditions, looking great for years with little maintenance.
- With easier maintenance and a longer lifecycle, resilient flooring means a lower cost of ownership throughout the life of the floor.
- Resilient flooring works well in all kinds of commercial and residential spaces.
- The flooring products are not only easier to keep clean, but are also tested for slip-resistance and designed for better indoor air quality.
- Resilient flooring provides unexpected versatility, cost savings, durability, safety, sustainability, and style.
- There are hundreds of different resilient flooring materials that bear the FloorScore label—the first indoor air quality testing program focused exclusively on hard surface flooring.
- Many resilient flooring products meet NSF 332, a stringent sustainability standard developed by NSF International, an independent sustainability developer.
